

# Wonder Cement Limited bolsters network security with gateway protection via SonicWall next-generation firewalls, Capture cloud sandbox

Wonder Cement Limited uses SonicWall solutions to ramp up security, visibility and performance across their network.

## Business Need

With anti-virus and anti-spam capabilities not up to the task to fight tailored and targeted cyber-attacks, Wonder Cement Limited was looking for sophisticated firewalls to prevent malware from entering the network, which would keep the data intact. Further, due to a multi-vendor environment, the company also missed centralized monitoring and management.

## Solution

Wonder Cement Limited deployed multiple SonicWall NSA next-generation firewalls in high availability, along with the SonicWall Capture Advanced Threat Protection (ATP) sandbox service. The company managed the solution using SonicWall GMS workflow management.

## Results

“Since the implementation of the solution, there has been no breach,” says Arun Attri, Vice President (IT). “Even during the WannaCry ransomware attack, our network was absolutely unaffected.”

## Benefits

- Enhanced security & performance
- Saved time and resources via centralized management console
- Improved reliability and reduced costs by moving to a single vendor for support and service

## Solutions at a glance

- [SonicWall NSA Firewall](#)
- [SonicWall Capture ATP](#)
- [SonicWall GMS](#)

“Our team tried and tested many solutions out there in the market for 2 months, measured with our protocols and found SonicWall’s solution the most suitable.”

*Arun Attri, Vice President (IT), Wonder Cement Limited*
